About Us

Introduced to the Australian and New Zealand markets in 2017 after extensive research and development – Signature Camper Trailers sought to introduce a quality locally assembled Camper Trailer suited to the tough Australian and New Zealand conditions.

Being 100% Australian Owned and Operated, and with a strong family friendly focus, the team at Signature Campers spend their weekdays developing and strengthening the Signature Camper product range and their weekends exploring Australia and putting the hard work to the test.

Our passion for exploring Australia means our experience and knowledge is utilised in our Camper Trailers. Covering every state and territory in Australia, including multiple trips to Cape York, the Victorian High Country, and parts of New Zealand means we talk from experience.

Let us help you in creating your own Experiences, Memories and Adventures with a Signature Camper Trailer.

Our Process

Our Camper Trailers and concepts are developed and designed in Australia. Utilising the best in manufacturing practices, the Signature Camper Trailers go through an initial build stage at one of our overseas Manufacturing facilities. Combining the Hot Dip Galvanised Chassis with heavy duty suspension and our premium Camper Trailer Bodies, the Camper Trailer is then sent to our local assembly workshop.

Our team complete the vital installation and certification processes including Australian licenced Plumbing and Electrical experts. Focusing on the running gear of our Camper Trailers, the hub assembly and suspension components are installed and configured for Australia's unique conditions.

Working with local experts and manufacturers, we develop and fine tune our Suspension systems to suit our Camper Trailers to ensure years of trouble-free travel. Installing only top quality components and accessories, such as Enerdrive charging systems, McHitch hitches & receivers and Ark Jockey Wheels ensures quality and reliability.

FOR THE TRUE OFF ROAD EXPLORER...

Campers don't come any more compact and pack as many features as our Signature Deluxe II. Compact, lightweight and packed with all the essentials, the Deluxe II will follow the 4wd wherever you take it. Mount your own tent & awning or use one of ours, the Deluxe II is adaptable and designed with you in mind as you adapt and modify to create your perfect outback base camp.

Towing Guide:

Disclaimer

The information contained in this document is a guide only - please consult your motor vehicle handbook or manufacturer for information specific to your vehicle.

Weights and Loading

When towing a Camper or Caravan there are several laws and guides to keep you and other road users safe. Knowing what the terms mean, your vehicles capabilities and your own capabilities are important for safe towing.

Correct Loading and Weights ensures happy and safe travels!

Signature Camper Trailers

p. 1300 935 400

www.signaturecampertrailers.com.au

office@signaturecampertrailers.com.au

Tow Vehicle

It is critical you consider your vehicles towing mass and trailer ball weight capacity. If no brakes are fitted to a trailer, then 750kgs is the maximum allowable towing capacity on any vehicle. Electric Brakes and a suitable Brake Controller must be fitted on all trailers of 750kgs or more.

An overweight Vehicle, Camper or inadequate Tow Vehicle could be both dangerous and Illegal.

Common Terms

Tare Mass:	The weight of your Camper with nothing on it. It does not include any payload.
ATM:	Aggregate Trailer Mass - the total weight of your Camper, including the tow ball mass and the payload. This weight must not be exceeded.
GTM:	Gross Trailer Mass - The total permissible mass, including payload, which can be supported by the wheels. This does not include tow ball mass.
Tow Ball Mass:	The weight imposed on the tow vehicles tow ball coupling.
Payload:	The allowable load carrying capacity. Worked out by deducting the "Tare Mass" from the "ATM". This must not be exceeded.
GVM:	Gross Vehicle Mass - The maximum allowable total mass of a fully loaded motor vehicle. Consisting of the "Tare Mass" plus the "Payload".
GCM:	Gross Combination Mass - Provided by the manufacturer, the maximum laden mass of the motor vehicle plus the maximum laden weight of an attached trailer.

Common Vehicle Examples

2020 Ford Everest: Towing Capacity - 3100kg	2020 Toyota Prado: Towing Capacity - 3000kg (automatic)
2020 Ford Ranger 4x4: Towing Capacity - 3500kg	2020 Toyota Landcruiser: Towing Capacity - 3500kg
2020 Ford Ranger Raptor: Towing Capacity - 2500kg	2020 Toyota Hilux: Towing Capacity - 3200kg (automatic)
2020 Toyota Kluger: Towing Capacity - 2000kg	2020 Subaru Forester: Towing Capacity - 1500kg

Charging Guide:

Disclaimer

The information contained in this document is a guide only - please consult with an Auto-Electrician and OEM Specifications & Guides.

How much power do I need?

How much power you need depends on so many factors, including the accessories you run (ie Fridges, Lights, Audio Systems, Phone Chargers etc), your access to power sources (ie 240v Charging, Solar Power, Generators and Vehicle Charging) and how long you want to run off Battery Power for.

Your Camper will be setup with Batteries which will have an Amp Hour (Ah) Rating.

An AGM battery has a 50% depth of discharge (ie a 100Ah Battery has 50Ah of usable power).

Accessories will vary in power usage from 0.5 amps per hour for LED lights to 3 amps per hour for a 12v TV. A Fridge could use on average 1.5 amps per hour depending on temperature, contents & how often it's opened.

Ensure your batteries remain above 50% charge (12.1v).

Electricity Supply

240v Charging involves plugging a 240v Charger into an Electrical Power Source.

240v Chargers will vary in their charging rate, from 6 amps per hour to over 40 amps per hour.

The Camper can be charged from home, a Caravan Park or Generator with a 240v Charger.

To connect to a Caravan Park 240v Site Connection, your Camper MUST have a 15amp 240v Site Connection including a Breaker Switch.

DC to DC Charger

A DC to DC Charger is a smart charger for your 12v System. It isolates the Car Batteries and Alternator from your Camper Batteries. The DC to DC Charger provides different levels of charging to your Camper Trailer batteries ensuring they remain 100% Charged from the power of your car.

Most high quality DC to DC Chargers also act as a Solar Regulator, allowing you to plug a Solar Panel into the charger to provide maximum solar charging for complete Off Grid Camping.

Camper Basic Form

From your Car - Signature Camper's come as Standard with a 50amp Anderson Plug (drawbar mounted). With an Anderson Plug installed at the rear of your vehicle, the Camper Trailer will receive power from your vehicle.

From Solar - Utilising the 50amp Anderson Plug (drawbar mounted), with a Solar Panel fixed with an inline Regulator and Anderson Plug Connection, you can attach your portable Solar Panel to your Signature Camper Trailer for Off Grid power.

From 240v Power - With a 240v charger, you can access the batteries whilst the Camper is open and attach a basic 240v Charger.

Keeping your drinks cold and food fresh means you'll need a reliable and safe power supply for longer Camping Adventures.
