About Us

Introduced to the Australian and New Zealand markets in 2017 after extensive research and development – Signature Camper Trailers sought to introduce a quality locally assembled Camper Trailer suited to the tough Australian and New Zealand conditions.

Being 100% Australian Owned and Operated, and with a strong family friendly focus, the team at Signature Campers spend their weekdays developing and strengthening the Signature Camper product range and their weekends exploring Australia and putting the hard work to the test.

Our passion for exploring Australia means our experience and knowledge is utilised in our Camper Trailers. Travelling every state and territory in Australia, including multiple trips to Cape York, the Victorian High Country, and parts of New Zealand means we talk from experience.

Let us help you in creating your own Experiences, Memories and Adventures with a Signature Camper Trailer.

Our Process

Our Camper Trailers and concepts are developed and designed in Australia. Utilising the best in manufacturing practices, the Signature Camper Trailers go through an initial build stage at one of our overseas Manufacturing facilities. Combining the Hot Dip Galvanised Chassis with our premium Camper Trailer Bodies, the Camper body is then sent to our Australian workshop.

Where many Imported Caravans are now exclusively fitted out in their country of origin, the SCT difference is the focus on Australian supplied Components with our Sydney based team of Australian mechanics, licenced Plumbing and Electrical experts.

From the running gear of our Camper Trailers including major suspension components such as our Tough Dog Engineered Shock Absorbers, which are supplied and installed in Australia, to the Industry Leading Electrical Fitout done in partnership with Australian Experts from REDARC & Enerdrive.

Our Systems are built in Australia with industry leading suppliers ensuring the best in workmanship & Australia best Warranty & Support.

Towing Guide: Common Terms

- Tare Mass:** The weight of your Camper with nothing on it. It does not include any payload.
- ATM:** Aggregate Trailer Mass - the total weight of your Camper, including the tow ball mass and the payload. This weight must not be exceeded.
- GTM:** Gross Trailer Mass - The total permissible mass, including payload, which can be supported by the wheels. This does not include tow ball mass.
- Tow Ball Mass:** The weight imposed on the tow vehicles tow ball coupling.
- Payload:** The allowable load carrying capacity. Worked out by deducting the "Tare Mass" from the "ATM". This must not be exceeded.
- GVM:** Gross Vehicle Mass - The maximum allowable total mass of a fully loaded motor vehicle. Consisting of the "Tare Mass" plus the "Payload".
- GCM:** Gross Combination Mass - Provided by the manufacturer, the maximum laden mass of the motor vehicle plus the maximum laden weight of an attached trailer.
